CLOSED·SYSTEM·600

MBST Magnetic Resonance treatment couch for: **shoulder, back, spine, intervertebral discs, hip, leg, double-knee**

The sliding lying surface allows the ideal positioning of physically handicapped patients in the treatment area. Because of the semi-open construction, even claustrophobic and anxious patients can be treated with MBST free of stress.

The proven CLOSED-SYSTEM-600 therapy device enables the gentle and safe treatment of multiple indications around the musculoskeletal system. These are for example degenerative diseases, disorders of bone metabolism, acute and chronic injuries.

One therapy session lasts for 60 minutes. As long as the body part treated remains within the treatment area, the patient is free to move. He can for instance read, listen to music or even sleep during the therapy. The attending physician defines the necessary number of therapy units depending on the indication and severity of the damage.

■ approx. 55 l treatment volume

The patented medical technology of the MBST therapy device in TÜV-certified quality complies with current EU norms and can be used for all age groups.
