

New MBST treatment centres in Great Britain

Treatment options for joint problems which might help to prevent surgery or the intake of pain killers are highly in demand not only in Germany. Since August, 3 new treatment centres for MBST magnetic resonance therapy have been established in Great Britain where patients suffering from for example osteoarthritis or osteoporosis can turn to for information and treatment.

Degenerative diseases are worldwide on the rise

More and more persons are affected by degenerative diseases of the musculoskeletal system such as osteoarthritis and osteoporosis. Especially in the industrial nations, many patients need medical help to live autonomously and with as little pain as possible. In the case of osteoarthritis, surgery is often recommended hastily which many patients want to avoid for as long as possible. This is why non-surgical treatment options in modern medicine are increasingly in high demand. One of these gentle non-surgical treatments is for example the MBST magnetic resonance therapy.

Therapeutically used magnetic resonance technology

MBST magnetic resonance therapy is a therapeutical development based on magnetic resonance technology that is known from MRI. MBST is not used for diagnostic purposes but with the aim of biophysically stimulating specific cells and tissues. Data from studies shows that the pain-free and silent MBST therapy may trigger processes in the treated tissues

which are still not ended after several years. Successfully treated patients report that they could prevent surgery and that their pain was reduced up to complete freedom of pain.

MBST newly established in Bath, Sheffield and Bournemouth

In three British cities, the MBST magnetic resonance therapy is available since August. In Bath, Sheffield and Bournemouth, patient can now get information about the treatment options in cases of, among others, osteoarthritis, osteoporosis, injuries of muscles, tendons, ligaments and bones or wound healing disorders and do the therapy with MBST therapy devices of the newest generation.

About MedTec Medizintechnik GmbH

Founded in 1998, MedTec Medizintechnik GmbH from Wetzlar has developed from a pioneer to world market leader in the field of therapeutically used MBST magnetic resonance technology. MedTec develops, produces and distributes the worldwide unique and patented technology that is used in MBST therapy system for human, veterinary and aesthetic medicine. Doctors, specialist, medical centres, hospitals, clinics and universities put their trust in the MBST therapy system today – not only in Germany and Europe but worldwide. It is MedTec's vision to enable a healthy, active and pain-free life for patients of nearly every age with its therapeutically used MBST technology. The MBST magnetic resonance therapy achieves that in the treatment of various degenerative diseases and injuries of the musculoskeletal system without needing drugs, injections, infusions, pain killers or surgical interventions. More than 1,000,000 hours of therapy have been applied with the MBST magnetic resonance technology so far without any side effects or interactions becoming known. MedTec Medizintechnik GmbH stands for global leadership of market and technology with its worldwide patented therapeutically used MBST magnetic resonance technology.
