

## MBST at DKOU in Berlin

Not only the numerous lectures, workshops and panels offer interesting information for orthopaedics and trauma surgeons around the world, the accompanying exhibition also present innovative therapy options for the daily practice, among others the MBST magnetic resonance therapy that is used for the treatment of various, common conditions of the musculoskeletal system.

### Modern treatment methods for orthopaedics and trauma surgery

Patients trust their doctors to help them with competence, benevolence and a responsible handling of medical progress. Unfortunately, these basic medical values are impeded in everyday practice by an increasing economic pressure and lack of staff. Today, the German Congress of Orthopaedics and Traumatology (DKOU) started. Acting based on evidence and values, was chosen as this year's slogan, to provide the patient with the best possible treatment despite difficult circumstances.

### Biggest orthopaedic congress in Europe

In the last years, DKOU has become the biggest European congress for orthopaedics and trauma surgery. Nearly 12,000 doctors from 60 nations will meet in the halls of Fair Berlin for further training and discussions from October 22 to 25. 1,800 presentations of science and research are an attractive offer for the augmentation of knowledge and orientation.

### Presentation of innovative treatment options

At the accompanying exhibition, innovative medical technology and new therapy options for typical conditions in orthopaedics and trauma surgery are presented which can complement the range of therapies within a doctor's practice with most modern treatments. MedTec Medizintechnik GmbH will show the newest therapy device generation with MBST magnetic resonance therapy at our stall: hall 4.2/09.

### Multiple options of use in orthopaedics and trauma surgery

MBST magnetic resonance therapy is a therapeutical development from magnetic spin technology that is also used in MRI for diagnostic purposes. It is used globally by doctors in certified MBST treatment centres such as practices, hospitals, clinics and universities. Especially the widespread diseases osteoarthritis, osteoporosis and disc complaints are treated, but increasingly also injuries of muscles, ligaments and tendons as well as wound healing disorders. MBST is a safe, painfree and non-invasive treatment that does not need surgery, injections and drugs. In more than 20 years of use, more than 1 million hours of therapy have been applicated with MBST. Until now, no side-effects or interactions have become known. Detailed information about the therapy, the active principle and the possible indications can be found on our website: [www.mbst.de](http://www.mbst.de).

### About MedTec Medizintechnik GmbH

Founded in 1998, MedTec Medizintechnik GmbH from Wetzlar has developed from a pioneer to world market leader in the field of therapeutically used MBST magnetic resonance technology. MedTec develops, produces and distributes the worldwide unique and patented technology that is used in MBST therapy system for human, veterinary and aesthetic medicine. Doctors, specialist, medical centres, hospitals, clinics and universities put their trust in the MBST therapy system today – not only in Germany and Europe but worldwide. It is MedTec's vision to enable a healthy, active and pain-free life for patients of nearly every age with its therapeutically used MBST technology. The MBST magnetic resonance therapy achieves that in the treatment of various degenerative diseases and injuries of the musculoskeletal system without needing drugs, injections, infusions, pain killers or surgical interventions. More than 1,000,000 hours of therapy have been applicated with the MBST magnetic resonance technology so far without any side effects or interactions becoming known. MedTec Medizintechnik GmbH stands for global leadership of market and technology with its worldwide patented therapeutically used MBST magnetic resonance technology.
